ABOUT UGAHACKS

UGAHacks is an annual hackathon at the University of Georgia. This year will mark our organization's fourth official hackathon and we hope to bring in both newcomers to tech and experienced hackers alike. Our greatest aspiration is to provide a worthwhile experience for every participant and contributor. Whether this may come in the form of providing motivation, expertise, and time to execute a project, or providing tools that aspiring programmers, designers and entrepreneurs need to build their skills- all in all, our greatest hope is that it will be a meaningful event and time to those involved.

WHY SPONSOR UGAHACKS?

We plan on having 300 - 400 participants. By sponsoring UGAHacks it will enable you to expose a new API or technology you are developing to a hundred-plus developers, gather potential interns, as well as more brand exposure. The money and/or equipment provided to us will help feed and gather merchandise to keep our hackers happy during the 48-hour event!

OUR GOAL

While our hackathon may not be advertised as grandiose as some larger university hackathons, we still wish to provide an environment that allows fresh developers to gather skills outside the classroom. We firmly believe a 2-3 day hackathon holds more educational value than what traditional class settings tend to offer. The hackathon experience will allow programmers to learn important skill sets such as how to read and develop with a foreign API, how to expand their creativity to tackle problems, and much more. The main goal we strive for as an organization is to help new developers become better coders and problem solvers.
